

Inventory and Logistics Policies

1. Inventory Management Best Practices

Inventory levels should be regularly monitored to avoid stockouts. Minimum stock levels must be established for all products. A comprehensive review of inventory should occur at least quarterly.

2. Order Fulfillment Guidelines

All orders must be fulfilled within 3 business days of receipt. Delays must be communicated promptly to clients. For orders delayed by more than 5 days, a 10% discount may be applied.

3. Supplier Contract Terms

Contracts with suppliers should clearly outline delivery schedules and payment terms. Contracts are reviewed annually. Amendments must be documented and agreed upon in writing.

4. Logistics and Distribution Policies

All logistics and distribution activities must be compliant with local transportation laws. Monitoring delivery routes is essential to optimize efficiency.

5. Risk Management Procedures

A risk assessment must be completed for major logistics operations. Contingency plans should be in place for supply disruptions. Annual reviews of risks and plans are necessary.

6. Compliance with Industry Standards

All suppliers must comply with relevant industry standards for safety and quality. Regular audits will be conducted to ensure compliance.
